

Powers Distributing Co. Makes Huge Commitment To 'GOING GREEN' With International DuraStar® Hybrid & LoneStar® Trucks From Tri-County International Trucks, Inc.

Leading beverage distributor based in Orion, MI is the first to commit to Hybrid technology in the beverage industry and looks to significantly reduce both fuel usage and emissions with fleet of advanced new trucks from Navistar International Corporation.

Dearborn, Michigan—February 19, 2009—Powers Distributing Company, a leading Michigan beverage distributor celebrating 70 years in business serving the Southeast Michigan community, has taken a major step to greatly reduce both its fleet's use of diesel fuel and simultaneously the emissions their fleet produces by recently taking delivery of no less than fifteen (15) of International DuraStar Hybrid Medium Duty Trucks from Tri-County International Trucks, Inc., Navistar International Corporation's Southeast Michigan franchise for the International line of diesel trucks.

At the same time, Powers Distributing has also taken delivery of an International LoneStar®, Navistar International's newest Class 8 tractor, which combines a modern twist on classic 'retro' styling with industry-leading fuel economy through its use of advanced engine technology and state-of-the-art aerodynamic engineering and design.

Powers Distributing started its commitment to a greener environment in 2008 by switching its fleet of more than fifty trucks from regular diesel to biodiesel. With the International DuraStar Hybrid's ability to increase diesel fuel economy anywhere from 25% to 40% in standard in-city pickup and delivery applications, Powers Distributing is looking to greatly reduce their diesel fuel bills and make a very significant contribution to the reduction of pollutants in our Michigan air by this commitment to the Navistar International DuraStar and LoneStar trucks. Navistar International trucks feature advanced in-engine technology in its new MaxxForce® line of engines which allow them to meet the strict new 2010 EPA emissions standards without the hassle of urea-based SCR post-emissions technology which other North American truck manufacturers employ.

“Powers Distributing is proud of its efforts to be a responsible corporate citizen in our Michigan community. This is a major investment by our firm that we hope will lead the way and influence other businesses to take similar actions to help preserve our nation’s energy resources and improve the quality of our environment and the air we all breathe here in Michigan,” said Gerald Powers, one of two Company Co-Presidents.

“Our fleet of trucks covers roughly 700,000 miles a year delivering well over five million cases of a wide range of beverages to our valued retail customers in Southeast Michigan. We’re looking forward to significantly lowering our fuel costs and emissions through our use of the International DuraStar Hybrid and LoneStar trucks,” said Gary Thompson, the company’s chief operating officer.

“Navistar International was the first to develop and deliver hybrid technology to the truck industry in the world,” said Steve Sexton, Sales Manager for Tri-County International Trucks, Inc of Dearborn. “International is not only leading the truck industry in fuel economy through its proprietary engine technology and aerodynamic engineering, they’re also leading the way in meeting 2010 emissions standards with advanced EGR (Emissions Gas Recirculation) in-engine technology which doesn’t burden the truck user with expensive and messy urea-based SCR (Selective Catalytic Reduction) solutions as other North American truck manufacturers employ.”
